ICP ANALYSIS REPORT

ISW Certent Equity Management

Ideal Customer Profile (ICP) Analysis — Closed Opportunity Dataset

A comprehensive data-driven analysis of 221 standard opportunities to define the ideal customer profile, identify high-converting segments, and prioritize outbound investment for ISW Certent Equity Management.

Records Analyzed

221 opportunities
73 Won · 148 Lost

Overall Conversion Rate

33.0% across all standard opportunities

Total ARR (Won)

$346.7k · Avg $19.3k per deal

Product Line

ISW Certent Equity Management

Executive Summary

Dataset Overview

Category	Records	% of Total	Status
TOTAL RECORDS IN DATASET	**262**	**100%**	--
Closed Won (All)	84	32.1%	--
Amendment Wins (excluded)	11	4.2%	Excluded
Standard Wins (analyzed)	73	27.9%	IN SCOPE
Closed Lost (All)	178	67.9%	--
Amendment Lost (excluded)	30	11.5%	Excluded
Standard Lost (analyzed)	148	56.5%	IN SCOPE

Scope: 221 standard opportunities comprising 73 Closed Won and 148 Closed Lost. Amendment records (contract changes to existing customers) are excluded as they do not represent new business acquisition patterns.

Analysis Overview

- **Records Analyzed:** 221 (73 Won, 148 Lost)
- **Overall Conversion Rate:** 33.0%
- **Total ARR (Closed Won):** $346.7k
- **Average ARR (Closed Won):** $19.3k
- **Product Line:** ISW Certent Equity Management

-- **NEUTRAL** — KPIs within +/-10% of overall average

v **DEPRIORITISE** — KPIs significantly below overall average (>10%)

Score Formula: (0.6 × CvR_normalized) + (0.4 × AvgARR_normalized)

ICP Definition Summary

The ideal ISW Certent Equity Management customer is a **publicly traded company with 200+ FTEs**, headquartered in California, Texas, or key financial hubs (NJ, MD, TN, WA), operating in Banking, Medical Equipment Manufacturing, Biotechnology, or Oil and Gas industries. Public companies convert at 43.1% (vs 33.0% overall) with $21.6k Avg ARR, while the 500+ FTE segment delivers the highest volume (31 wins) and strongest ARR ($23.4k). Existing customer expansion shows exceptional conversion (50.9%) and should be prioritized alongside net-new public company acquisition.

Key Findings

Public Companies Are the Core Buyer

43.1% CvR vs 14.7% for Private companies, with 56 of 73 total wins (77% of all wins)

Mid-Market to Enterprise FTE Sweet Spot

201-500 FTEs (41.9% CvR) and 500+ FTEs (39.7% CvR, $23.4k Avg ARR) significantly outperform smaller segments

Existing Customer Expansion Is Highly Efficient

50.9% CvR for existing customers vs 16.5% for new customers; new customers generate higher Avg ARR ($22.1k vs $14.8k)

California Dominates Volume

17 wins at 44.7% CvR with $23.2k Avg ARR; secondary markets include NJ, WA, TN, and MD with strong conversion rates

Banking and Life Sciences Outperform

Banking (59.3% CvR), Medical Equipment Manufacturing (66.7% CvR, $24.9k ARR), Biotechnology (80.0% CvR), and Oil and Gas (66.7% CvR) are top performers

International Markets Underperform

Only 5 wins outside the US, with Canada converting at just 7.7%

Top Recommendations

01

Double Down on Public Companies 200+ FTEs

Highest-converting, highest-ARR profile aligned with ASC 718 compliance requirements that drive purchase urgency

02

Prioritize California Outbound

Secondary focus on NJ, WA, TN, MD; deprioritize FL, CO, OH, and IL where conversion rates lag significantly

03

Build Vertical Campaigns for Banking, Medical Equipment, and Biotech

These industries convert 1.5–2.4x the overall rate and align with equity-heavy compensation structures

04

Invest in Existing Customer Expansion Motion

The 50.9% CvR represents a high-efficiency path to ARR growth; identify cross-sell and upsell opportunities within the ISW customer base

05

Deprioritize SMB and Private Company Outbound

Conversion rates of 10–29% and lower ARR make these segments inefficient for outbound investment

FTE Band Analysis

FTE Band	Total Opps	Won #	CvR	Total ARR	Avg ARR	CvR × Avg ARR	ICP Score

ICP Score Summary

PRIORITISE: 201-500 FTEs, 500+ FTEs

DEPRIORITISE: 1-10 FTEs, 11-50 FTEs, 51-200 FTEs

Headline Metrics

- **Highest Conversion Rate:** 201-500 FTEs at 41.9%
- **Highest Avg ARR:** 500+ FTEs at $23.4k
- **Highest Volume:** 500+ FTEs with 31 wins

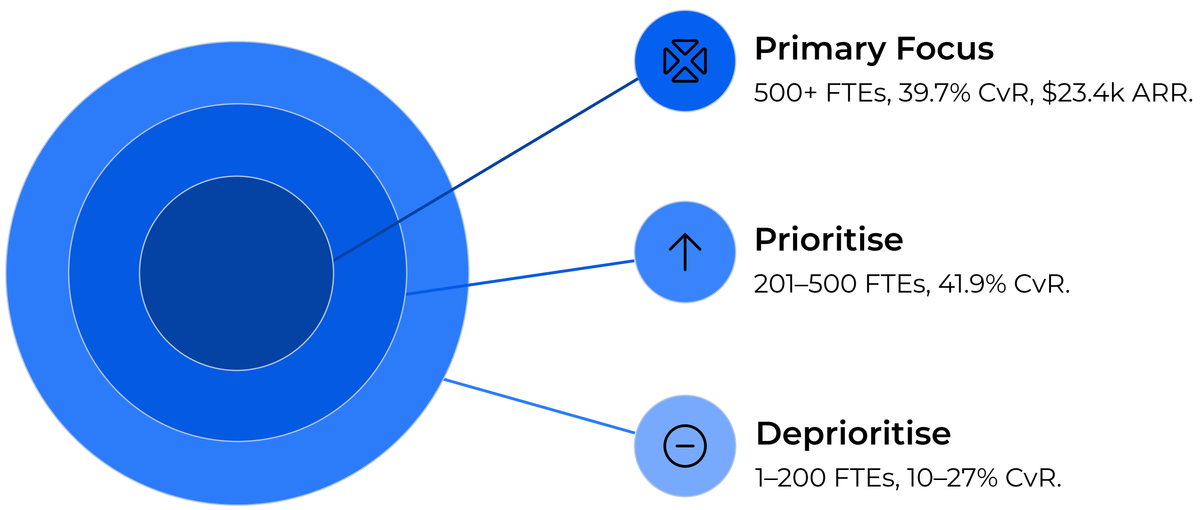
Key Insights

The data strongly supports focusing on mid-market and enterprise companies (200+ FTEs) for Certent Equity Management outbound. The 201-500 FTE band converts at 41.9% — nearly 9 percentage points above the 33.0% overall average — indicating strong product-market fit for companies reaching the complexity threshold where manual equity management becomes untenable.

The 500+ FTE segment delivers both volume (31 wins, 42% of all wins) and the highest Avg ARR at $23.4k, which is 21% above the overall average of $19.3k.

The SMB segments (1-200 FTEs) collectively show CvR ranging from 10.0% to 29.0%, all below the 33.0% benchmark. The 1-10 FTE band is particularly weak at 10.0% CvR, likely reflecting that very small companies lack the equity plan complexity or compliance requirements to justify investment in dedicated equity management software. The combined CvR × Avg ARR metric reinforces this pattern: 500+ FTEs generates $9.3k per opportunity compared to just $1.7k–$4.3k for sub-200 FTE bands.

This aligns with the product's value proposition — equity compensation complexity scales with headcount as companies issue more grants, manage more participants, and face greater compliance exposure. The data suggests a clear **200 FTE minimum threshold** for outbound targeting, with enterprise (500+) as the primary focus given the ARR premium.



The 200 FTE threshold marks a clear inflection point in conversion performance, reflecting the point at which equity plan complexity justifies dedicated software investment.

Key Insights

Geographic concentration is heavily US-centric, with 68 of 73 wins (93%) coming from United States accounts. The US converts at 36.4%, above the overall 33.0% rate, confirming domestic focus is appropriate.

California is the dominant market with 17 wins (25% of all US wins) at 44.7% CvR and $23.2k Avg ARR — both metrics exceeding benchmarks. This aligns with California's concentration of tech companies, biotech firms, and public companies with complex equity plans. California should receive the highest outbound investment.

Secondary priority markets show strong efficiency: New Jersey (58.3% CvR), Washington (50.0% CvR, $28.1k Avg ARR), Tennessee (100% CvR, $74.8k Avg ARR), and Maryland (75.0% CvR, $23.2k Avg ARR) all significantly outperform. Washington's tech hub (Seattle) and New Jersey's financial services concentration align with high-equity-complexity sectors.

Deprioritize underperforming states: Florida (16.7% CvR), Colorado (16.7% CvR), Illinois (0% CvR), Ohio (0% CvR), and Missouri (0% CvR) show weak conversion despite reasonable opportunity volume.

International markets are not viable for outbound: With only 5 wins outside the US and Canada converting at just 7.7% (1 of 13 opportunities), international expansion requires significant market development before outbound investment makes sense. Focus outbound resources entirely on US accounts.

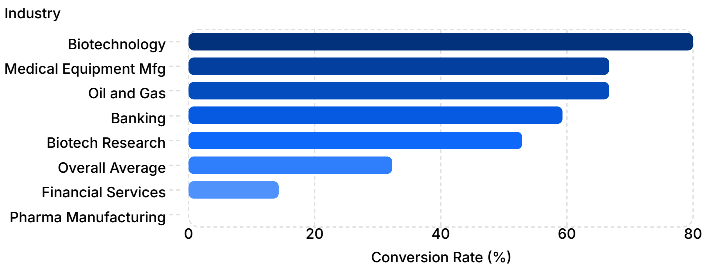
ICP Score Summary

PRIORITISE: Banking, Medical Equipment Manufacturing, Biotechnology, Oil and Gas

DEPRIORITISE: Financial Services, Mining, IT Services and IT Consulting, Pharmaceutical Manufacturing

Top Industry Conversion Rates



Key Insights

Industry segmentation reveals clear winners for Certent Equity Management outbound. The top-performing industries share a common characteristic: publicly traded companies with significant equity compensation programs for specialized workforces.

Banking is the volume leader with 16 wins at 59.3% CvR — nearly double the 32.3% industry average. Banks, particularly publicly traded financial institutions, face rigorous equity reporting requirements and typically have broad-based equity plans for retention. Note: The distinct "Financial Services" category converts at only 14.3%, suggesting differentiation between traditional banking and other financial services is critical in targeting.

Life Sciences verticals excel: Medical Equipment Manufacturing (66.7% CvR, $24.9k Avg ARR) and Biotechnology (80.0% CvR, $21.4k Avg ARR) both dramatically outperform benchmarks. These industries rely heavily on equity compensation to attract scientific and engineering talent, creating natural demand for equity management solutions. Biotechnology Research also converts at 52.9%, reinforcing the life sciences vertical opportunity.

Oil and Gas is an unexpected winner at 66.7% CvR and $26.4k Avg ARR — the highest ARR among prioritized industries. Energy companies, particularly publicly traded E&P firms, often have complex equity structures including performance-based awards tied to commodity prices.

Deprioritize: Pharmaceutical Manufacturing (0% CvR), Mining (12.5% CvR), and IT Services (20.0% CvR) despite their apparent fit — the data does not support outbound investment in these segments.

Company Type Analysis

Company Type	Total Opps	Won #	CvR	Total ARR	Avg ARR	CvR × Avg ARR	ICP Score

ICP Score Summary

PRIORITISE: Public

DEPRIORITISE: Private

Why Public Companies?

Public companies face mandatory equity reporting requirements under **ASC 718 (US GAAP)** and **IFRS 2**. These compliance obligations create a regulatory forcing function that drives urgency and reduces sales cycle friction.

Key Insights

Company type is the **single most predictive dimension** in this analysis. Public companies convert at 43.1% — 10 percentage points above the 33.0% overall rate and nearly 3x the 14.7% conversion rate for Private companies. Public companies also deliver higher Avg ARR ($21.6k vs $13.8k), generating a CvR × Avg ARR of $9.3k compared to just $2.0k for Private companies.

Private companies (VC-backed, PE-backed, pre-IPO) show weaker conversion at 14.7%, despite having growing equity complexity as they scale. Several factors may explain this:

- Pre-revenue or early-stage private companies may lack budget for dedicated equity software
- Private companies face less compliance pressure until approaching IPO
- Founder-led private companies may undervalue equity administration until cap table complexity becomes painful

Outbound targeting recommendation: Focus 75%+ of outbound resources on publicly traded companies. For private companies, prioritize late-stage (Series C+) or PE-backed companies with near-term IPO or liquidity event timelines, where compliance preparation creates urgency. The 77% of wins coming from public companies (56 of 73) confirms this should be the primary acquisition motion.

Customer Type Analysis

Customer Type	Total Opps	Won #	CvR	Total ARR	Avg ARR	CvR × Avg ARR	ICP Score
New Customer	115	19	16.5%	$243.4k	$22.1k	$3.7k	v DEPRIORITISE
Existing Customer	106	54	50.9%	$103.3k	$14.8k	$7.5k	^ PRIORITISE
TOTAL	**221**	**73**	**33.0%**	**$346.7k**	**$19.3k**	**$6.4k**	**-- NEUTRAL**

Key Insights

The customer type split reveals a critical insight for ISW Certent's go-to-market motion: **existing customer expansion is dramatically more efficient than new customer acquisition**, but new customers drive higher deal values.

Expansion Motion (Existing Customers)

50.9% CvR — more than 3x the new customer rate

Existing ISW customers already have a relationship, trust the brand, and may be expanding from other ISW products into Certent Equity Management. The sales cycle is shorter and friction is lower. This is a **sales efficiency play** — lower CAC, faster close.

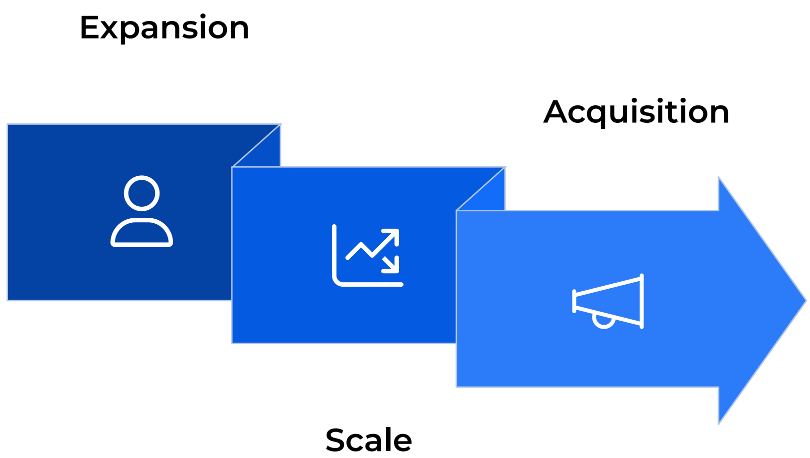
ISW should systematically identify existing customers using other ISW products (financial reporting, disclosure management) who do not yet have Certent Equity Management.

Acquisition Motion (New Customers)

$22.1k Avg ARR — 49% premium over existing customer deals

While only 16.5% convert, new customers represent the **growth engine** and deliver 49% higher ARR. The 16.5% CvR is not unusual for complex B2B software; it simply requires more pipeline volume and a more disciplined ICP focus (public companies, 200+ FTEs, Banking/Biotech/MedDevice industries) to improve yield.

New customer deals likely include full platform implementations, while existing customer deals may represent more incremental expansions or add-on modules.



Recommendation: Run parallel motions — a dedicated expansion program for existing ISW accounts and a tightly-ICP-focused outbound program for net-new public company acquisition. The expansion motion can generate efficient base revenue while new customer acquisition drives growth at higher ARR.

Annual Revenue Band Analysis

Annual Revenue	Total Opps	Won #	CvR	Total ARR	Avg ARR	CvR × Avg ARR	ICP Score

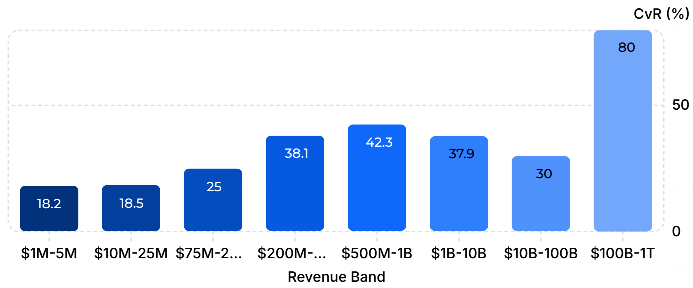
DEPRIORITISE: 1M-5M, 10M-25M, 75M-200M, 500K-1M

Revenue Tier Performance



Key Insights

Annual revenue analysis reveals a nuanced pattern: **the largest enterprises ($10B+) deliver the highest performance, while the broad mid-market ($200M-10B) represents the volume sweet spot.**

Enterprise ($10B+) — Premium Results

- $10B-100B: $74.8k Avg ARR — nearly 4x the overall average
- $100B-1T: 80.0% CvR (4 of 5 opportunities)
- Mega-enterprises have the most complex equity programs and highest willingness to pay

Mid-Market to Large-Cap ($200M-10B) — Volume Sweet Spot

- $500M-1B: 42.3% CvR, 11 wins
- $1B-10B: 37.9% CvR, 11 wins
- $200M-500M: 38.1% CvR, 8 wins
- All three bands exceed the 32.1% overall CvR

SMB (<$75M) — Underperform

- $500K-1M: 0% CvR (0 of 5)
- $1M-5M: 18.2% CvR
- $10M-25M: 18.5% CvR
- Companies below ~$75M often lack equity program complexity or budget

Targeting recommendation: Set a $200M minimum revenue threshold for outbound targeting, with a priority tier for $10B+ enterprises where deal sizes are significantly larger. The $25M-75M segment (31.7% CvR, 13 wins) represents an exception worth monitoring but should not be the primary focus.

Sales Rep Performance

Sales Rep	Total Opps	Won #	CvR	Total ARR	Avg ARR	CvR × Avg ARR	ICP Score
Samuel Badmos	51	44	86.3%	$59.4k	$11.9k	$10.2k	^ PRIORITISE
Justin James	35	10	28.6%	$129.3k	$43.1k	$12.3k	^ PRIORITISE

Jeremiah Bauer	33	4	12.1%	$65.7k	$16.4k	$2.0k	v DEPRIORITISE
Dan Mullen	24	3	12.5%	$63.9k	$21.3k	$2.7k	v DEPRIORITISE
Sean Lembree	3	2	66.7%	$0	N/A	$0	^ PRIORITISE
Drew Kulak	4	0	0.0%	$0	N/A	$0	v DEPRIORITISE
Gerald Nunez	1	0	0.0%	$0	N/A	$0	v DEPRIORITISE
Michael Mauro	3	0	0.0%	$0	N/A	$0	v DEPRIORITISE
Yvette Lewis	16	0	0.0%	$0	N/A	$0	v DEPRIORITISE
Cory McCarty	16	0	0.0%	$0	N/A	$0	v DEPRIORITISE
TOTAL	**221**	**73**	**33.0%**	**$346.7k**	**$19.3k**	**$6.4k**	**-- NEUTRAL**

⚠ Sales rep performance shows significant variance, though territory assignment, segment specialization, and opportunity quality likely explain much of the difference. Avoid interpreting this as a pure "ranking" — context matters.

Top Performers by Efficiency

Samuel Badmos — High-Velocity Conversion

86.3% CvR across 51 opportunities (44 wins). Exceptional rate suggests highly efficient sales motion or assignment to higher-propensity accounts (possibly existing customer expansion). $11.9k Avg ARR is below average, consistent with smaller expansion deals.

Justin James — Large-Deal Specialist

28.6% CvR (below average) but $43.1k Avg ARR — more than 2x the overall average. Suggests focus on larger, more complex new business deals with longer sales cycles.

Hannah McCullough — Perfect Conversion

100% conversion (5 of 5) but limited sample size and no ARR data available for full assessment.

Performance Patterns & Recommendations

The contrast between Badmos (high CvR, low ARR) and James (lower CvR, high ARR) suggests **distinct sales motions** that may warrant different support models.

Reps with 0% conversion (Yvette Lewis, Cory McCarty — both with 16 opps) may be in ramp-up phase, assigned to greenfield territories, or working deprioritized segments.

Action Items

1. Document Samuel Badmos's approach to high-velocity conversion for potential playbook development
2. Investigate Justin James's large-deal motion for enterprise segment best practices
3. Review territory/segment assignments for reps with 0% conversion before drawing conclusions
4. Ensure ICP-fit opportunities are distributed proportionally across the team

ICP Definition & Recommendations

Tier 1 — PRIORITISE

FTE Range: 200+ FTEs, emphasis on 500+ FTEs (39.7% CvR, $23.4k ARR)

Geography: US only; CA primary (44.7% CvR), secondary: NJ (58.3%), WA (50.0%, $28.1k), TN (100%), MD (75.0%), NC (50.0%)

Industry: Banking (59.3%), Medical Equipment Mfg (66.7%, $24.9k), Biotechnology (80.0%), Oil and Gas (66.7%, $26.4k)

Company Type: Publicly traded (43.1% CvR, $21.6k ARR) — single most predictive attribute

Revenue: $200M+ annual revenue; priority tier for $10B+ enterprises ($74.8k Avg ARR)

Customer Motion: Dual — existing ISW expansion (50.9% CvR) + net-new public company acquisition ($22.1k ARR)

Tier 2 — NEUTRAL (Good Prospects)

Segments with average performance that may convert with the right messaging but should not receive premium outbound investment:

- **FTE:** 51-200 FTEs (27.3% CvR) — may include pre-IPO companies scaling equity programs
- **Geography:** Texas (31.6% CvR, $17.8k ARR), Georgia (50.0% CvR), Minnesota (40.0% CvR)
- **Industry:** Software Development (33.3% CvR, $15.4k ARR), Biotechnology Research (52.9% CvR), Real Estate (28.6% CvR)
- **Revenue:** $25M-75M (31.7% CvR, 13 wins)
- **Private companies:** Late-stage (Series C+) or PE-backed with near-term IPO/liquidity event timelines

Avoid List — DEPRIORITISE

- **FTE:** Sub-200 FTEs, especially 1-10 FTEs (10.0% CvR) and 11-50 FTEs (29.0% CvR)
- **Geography:** FL (16.7%), CO (16.7%), IL (0%), OH (0%), MO (0%); all international markets
- **Industry:** Financial Services (14.3%), Pharmaceutical Manufacturing (0%), Mining (12.5%), IT Services (20.0%)
- **Company Type:** Private without clear IPO timeline (14.7% CvR), Partnerships (0%)
- **Revenue:** Sub-$25M, especially $500K-1M (0%) and $1M-5M (18.2%)

Double Down Recommendations

1

Public Company Vertical Program

77% of wins from public companies. Create targeted campaigns around ASC 718 compliance, 10-K disclosure, and audit readiness.

2

Banking Industry Campaign

59.3% CvR (16 wins). Target publicly traded banks in CA, NJ, and NY with messaging around equity plan administration for regulated industries.

3

California Outbound 2x

25% of US wins with above-average CvR and ARR. Increase SDR/BDR allocation to CA-based public companies in Banking, Biotech, and Medical Equipment.

4

Systematize Expansion

50.9% CvR for existing customers. Build a cross-sell program targeting ISW customers using financial reporting or disclosure management products.

Deprioritize Recommendations

Reduce SMB Outbound

Sub-200 FTE and sub-$75M revenue companies convert at 18-29% with lower ARR. Redirect resources to enterprise segments. If SMB leads come inbound, qualify tightly for public company status and near-term IPO timelines.

Exit International Outbound

93% of wins in the US and Canada converting at only 7.7%. International outbound is not ROI-positive. Handle international inquiries reactively but do not invest in proactive outreach outside the US.

Avoid Financial Services & IT Services

Despite surface-level fit, these industries convert at 14.3% and 20.0% respectively. Focus industry resources on Banking, Biotech, Medical Equipment, and Oil and Gas instead.

Deprioritize FL, CO, IL, OH, MO

These states show 0-16.7% CvR despite reasonable opportunity volume. Reallocate outbound capacity to CA, NJ, WA, TN, MD, and NC.

Appendix: Methodology

ICP Score Calculation

> **ICP Score = (0.6 × CvR_normalized) + (0.4 × AvgARR_normalized)**

Where:

- `CvR_normalized` = Segment CvR / Overall CvR (33.0%)
- `AvgARR_normalized` = Segment Avg ARR / Overall Avg ARR ($19.3k)

Classification Thresholds

Label	Score Range
^ PRIORITISE	Score > 1.10
-- NEUTRAL	Score 0.90 – 1.10
v DEPRIORITISE	Score < 0.90

Minimum Sample Thresholds

Dimension	Min Opportunities
FTE Bands	5
US States	3
Industries	5
Company Types	5
Revenue Bands	3

Data Notes

ARR Parsing

ARR parsed from Annualized Bookings Conversion field ("USD X,XXX.XX" format)

Amendment Exclusions

Amendment record types excluded — these represent contract changes to existing customers, not new acquisition patterns

Null Value Handling

Empty/null values excluded from averages (not treated as zeros)

Data Source

Clay export of ISW Certent Equity Management Salesforce closed opportunities

Missing Fields

No Win/Loss Reason field available in this dataset. No GRR or Profit Margin fields available in this dataset.

> ⓘ **Note on ARR Coverage:** ARR data is available for only 18 of 73 won records (24.7%). Avg ARR figures should be interpreted with caution — they reflect the subset of deals with available data, not the full population. Segments showing "N/A" for Avg ARR had no ARR data available and are scored on CvR alone.
