

Constellation // Combined Outbound Report

APRIL 27 – MAY 8, 2026

8 CAMPAIGNS

This report covers the full outbound performance for Constellation across both email (Instantly) and LinkedIn (HeyReach) channels during the reporting window. Four email campaigns and four LinkedIn campaigns were active during this period. Across all eight campaigns, engagement remained below benchmark — with zero replies generated on any channel. This document breaks down campaign-level performance, identifies what's working technically, and highlights the critical gaps preventing outreach from converting into conversations.

Executive Summary

SECTION 1

Across all eight campaigns — four on Instantly (email) and four on HeyReach (LinkedIn) — **zero replies were generated** during the reporting window. While some campaigns demonstrated healthy technical signals such as open rates, connection acceptances, and clean deliverability, none succeeded in converting initial engagement into active prospect conversations.

Instantly Campaigns

Two campaigns sent emails with healthy deliverability. Two campaigns sent zero emails due to technical/setup issues. No replies across all four.

HeyReach Campaigns

One campaign sent connection requests with a 22% acceptance rate. Three campaigns initiated zero outreach. No replies across all four.

Universal Challenge

The core issue across channels is converting technical delivery into human responses. Messaging, sequencing, and targeting require immediate review.

Campaign Overview

SECTION 2

Eight campaigns ran across two platforms during the April 27 – May 8, 2026 window. All Instantly campaigns used rob@try-constellation.com and benjamin@try-constellation.com as sender accounts. All HeyReach campaigns were operated by Rob Doebelin on LinkedIn.

Campaign Name	Platform	Status	Senders	Window
Dor // Screenshot + Link	Email (Instantly)	Active	2 senders	Apr 27–May 8
Dor // Gated CTA	Email (Instantly)	Active	2 senders	Apr 27–May 8
Dor (V5)	Email (Instantly)	Completed	2 senders	Apr 27–May 8
Dor (V4)	Email (Instantly)	Completed	2 senders	Apr 27–May 8
Dor (V5)	LinkedIn (HeyReach)	In Progress	Rob Doebelin	Apr 27–May 8
Dor (v4)-2/3	LinkedIn (HeyReach)	Finished	Rob Doebelin	Apr 27–May 8
Stalled	LinkedIn (HeyReach)	Paused	Rob Doebelin	Apr 27–May 8
Digital Evidence	LinkedIn (HeyReach)	Finished	Rob Doebelin	Apr 27–May 8

Instantly — Email Performance Scorecard

SECTION 3

EMAIL CHANNEL

Of the four Instantly email campaigns, only two actually sent emails during the reporting period. Both active campaigns demonstrated solid deliverability signals but failed to generate any replies. The two completed campaigns — Dor (V5) and Dor (V4) — sent zero emails due to setup or sequencing issues.

Campaign	Emails Sent	Leads Contacted	Open Rate	Bounce Rate	Reply Rate
Dor // Screenshot + Link	265	251	15.85%	0.38%	0.00%
Dor // Gated CTA	189	164	10.58%	1.06%	0.00%
Dor (V5)	0	0	0.00%	0.00%	0.00%
Dor (V4)	0	0	0.00%	0.00%	0.00%

 All four Instantly campaigns produced a 0.00% reply rate. While open rates on active campaigns are positive signals, they have not translated into prospect conversations.

HeyReach — LinkedIn Performance Scorecard

SECTION 3

LINKEDIN CHANNEL

The LinkedIn campaigns tell a similar story — one campaign made meaningful progress with connection requests, but three campaigns initiated zero outreach. Technical failures were the dominant theme, with the Dor (v4)-2/3 campaign experiencing a staggering 47.43% failure rate on lead processing.

Campaign	Total Leads	Conn. Sent	Conn. Accepted	Messages Sent	Replies	Failed %
Dor (V5)	881	131	29 (22.14%)	0	0	18.50%
Dor (v4)-2/3	603	0	0	0	0	47.43%
Stalled	183	0	0	0	0	0.55%
Digital Evidence	66	0	0	0	0	3.03%

✖

Dor (v4)-2/3 experienced a 47.43% lead failure rate — nearly half the list could not be processed. This requires immediate technical investigation before any further outreach is attempted on this campaign.

Reply Highlights

SECTION 4

 Email Replies (Instantly)

Zero replies were received across all four Instantly campaigns during the reporting window. No human replies, no auto-replies, and no positive or negative sentiment signals were captured. This is consistent across both active and completed campaigns.

Dor // Screenshot + Link 0 replies	Dor // Gated CTA 0 replies
Dor (V5) 0 replies	Dor (V4) 0 replies

 LinkedIn Replies (HeyReach)

Zero conversations with replies were recorded across all four HeyReach campaigns. Even the Dor (V5) campaign — which successfully generated 29 accepted connections — failed to convert any of those new relationships into active dialogue.

Dor (V5) 0 replies	Dor (v4)-2/3 0 replies
Stalled 0 replies	Digital Evidence 0 replies

Key Insights — Email Campaigns

SECTION 5

INSTANTLY

Dor // Screenshot + Link

✅ **Working:** Near-zero bounce rate and a 15.85% open rate signal healthy deliverability and subject line appeal.

⚠️ **Watch:** Clicks and opens are not converting into replies. The body copy or CTA is not compelling prospects to respond.

Dor // Gated CTA

✅ **Working:** Deliverability was clean and the campaign generated a 10.58% open rate without click tracking active.

⚠️ **Watch:** Zero replies received. Click engagement is untracked, creating a blind spot in the funnel analysis.

Dor (V5) & Dor (V4)

✅ **Working:** Sender accounts were warmed up and healthy. Lead lists were prepared and ready.

⚠️ **Watch:** Both campaigns sent zero emails. The issue is a setup or sequencing failure — not message performance.

Key Insights — LinkedIn Campaigns

SECTION 5

HEYREACH

Dor (V5) — Connections Without Conversations

What's working: A 22.14% connection acceptance rate is a solid signal — prospects are receptive to the outreach profile. 131 connection requests went out to an 881-lead list.

Critical gap: Zero messages were sent to accepted connections. The follow-up sequence after connection is broken or missing entirely, resulting in wasted accepted connections.

Dor (v4)-2/3 — Critical Technical Failure

What's working: The sender account remained authenticated and active throughout the campaign run.

Critical gap: A 47.43% lead failure rate halted all outreach. 286 of 603 leads could not be processed, and zero connection requests or messages were sent. This requires immediate technical triage.

Stalled & Digital Evidence — Inactive Campaigns

What's working: Lead lists were loaded and sender accounts were configured and authenticated.

Critical gap: Both campaigns produced zero outreach activity. "Stalled" was paused throughout the reporting window. "Digital Evidence" finished without initiating a single connection request or message.

Cross-Channel Failure Analysis

DIAGNOSTIC VIEW

Mapping failure modes across all eight campaigns reveals three distinct problem categories. Understanding which type of failure each campaign experienced is critical for prioritizing the right fixes before the next cycle.

Recommendations & Next Steps

COMBINED READOUT

The reporting period from April 27 to May 8, 2026 revealed a campaign portfolio under significant stress across both channels — while technical infrastructure showed signs of health in isolated areas, such as low bounce rates on active email campaigns and a 22% LinkedIn connection acceptance rate on Dor (V5), the universal absence of replies across all eight campaigns signals that the current messaging and sequencing strategy is not resonating with the target audience, and several campaigns were additionally blocked by critical technical failures that prevented any outreach from being initiated at all.

01

Fix Technical Blockers Immediately

Investigate and resolve the 47.43% failure rate in Dor (v4)-2/3. Diagnose why Dor (V5) and Dor (V4) email campaigns sent zero emails despite prepared lists. Reactivate or retire the Stalled campaign.

03

Revise Messaging & CTAs

Active email campaigns are generating opens but zero replies. The subject line is working — the body copy and call-to-action are not. A/B test new angles, reduce friction in the CTA, and make the reply ask more direct.

02

Repair the Post-Connection Sequence

Dor (V5) LinkedIn accepted 29 connections but sent zero follow-up messages. Build and activate a follow-up message sequence to convert accepted connections into conversations before these leads go cold.

04

Enable Click Tracking

The Dor // Gated CTA campaign lacks click tracking, creating a critical measurement gap. Enable tracking before the next send cycle to understand where prospects drop off in the engagement funnel.
